

RH-100: a hundred-layer audit leaves a precise Stage-A frontier, not a zero theorem

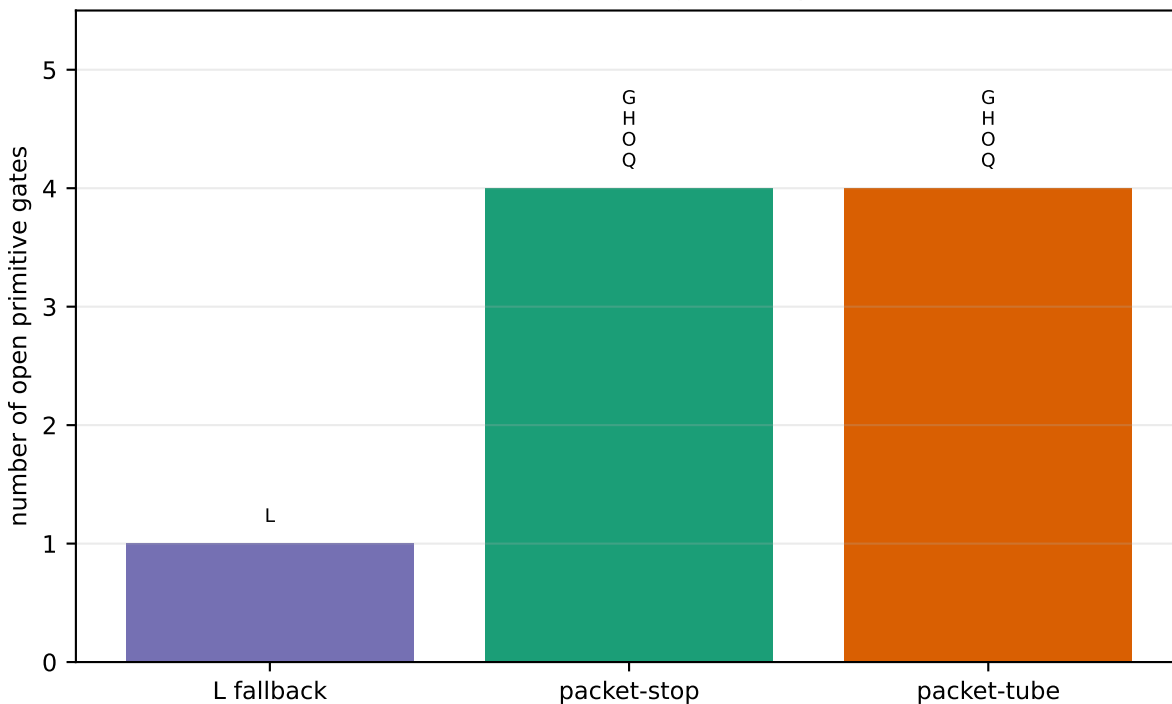

(a) Ninety-nine layers: exact structure and route barriers

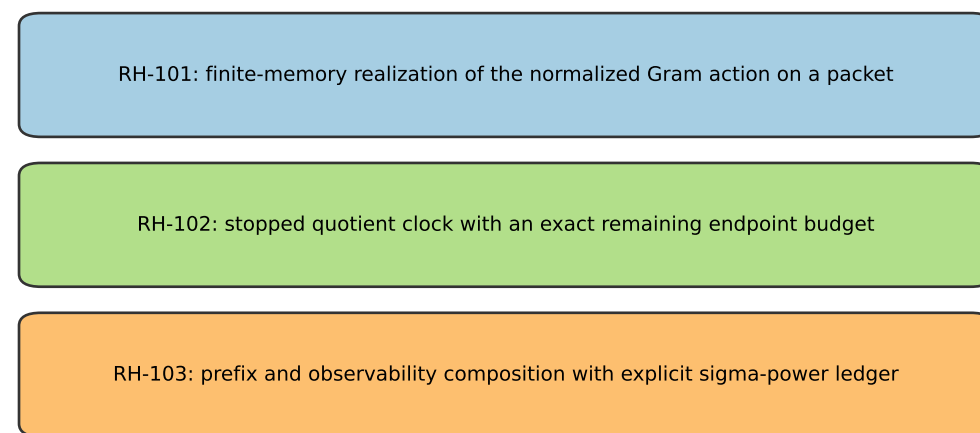

(b) Revised minimal Stage-A/A5 frontier

(c) Three inclusion-minimal Stage-A completion bundles

(d) Selected post-centennial sequence

After RH-103: only the uniform gap-aware quotient law remains inside the preferred packet Stage-A bundle; A5 stays separate.
